

Dendritic cells: capture pathogen's travel to lymph nodes, & present pieces of pathogen to other cells of the immune system

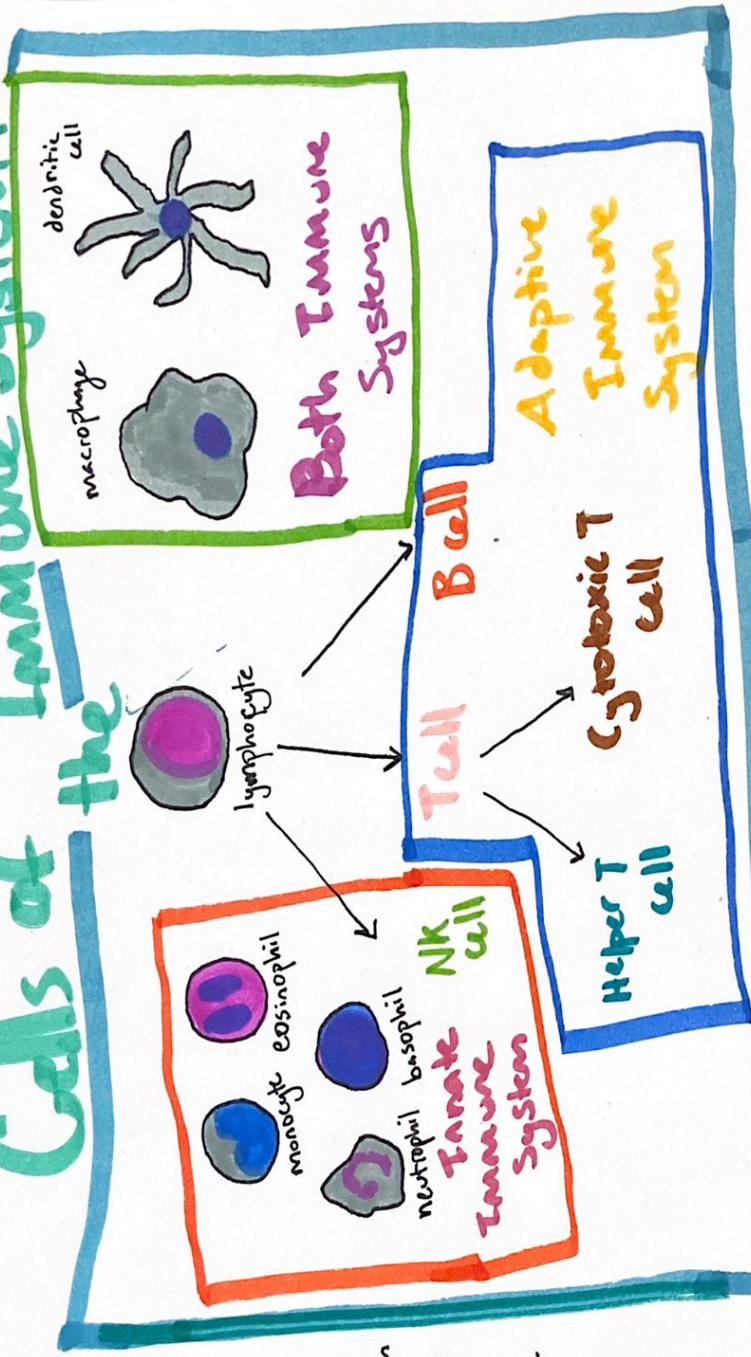

(T cells) → on cell surface → T cell bind to same antigen

Helper T cells orchestrate → Immune Response

Cytotoxic T cells have TCRs

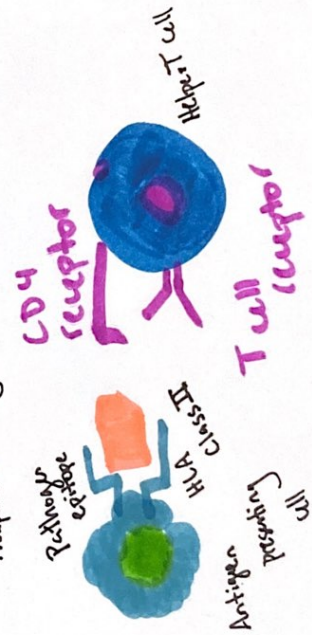

Cells of the Immune System:

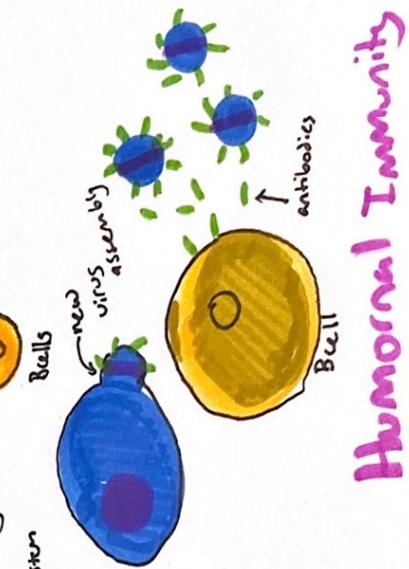

Innate immune responses attack microbes indiscriminately → non-specific defense

Adaptive immunity focuses on elements of adaptive immune system

B cells → make antibodies

Humoral Immunity
